Our participation in SAPPHIRE NOW 2017 in Orlando, FL

SAPPHIRE NOW was a remarkable experience for us. This year we exhibited jointly at two booths with two of our partners, Zebra Technologies & HERE Technology. With Zebra we showcased our SAP cloud platform based mobility expertise. Our Fiori based Warehouse Management, Direct Store Delivery (DSD), Plant Maintenance, and Calibration mobile applications received tremendous interest from attendees. Crave's Mobile Rapid Deployment Solution (mRDS) which helps to build offline & online Fiori applications without any coding attracted attendees from all over the world.

At HERE Technologies booth, we unveiled our Connected Vehicle application built on SAP Cloud platform using HERE's powerful location intelligence. Some of the highlights of the solution include:

- Real-time visibility of asset locations and driving patterns
- Plan vs. action route optimization
- Map-based dispatch & scheduling
- Geo-fencing to restrict vehicle movements
- Potential vehicle and fuel theft monitoring
- Seamless integration with SAP & Transport Management

We plan to roll out several appealing initiatives in the coming months to benefit from the interest we've received at SAPPHIRE NOW.

Congratulations to Lisa Gilliatt & Prabhakar for winning the Amazon Alexa from Crave at SAPPHIRE NOW!

cMaintenance app has been rolled out for our giant Pharma client - We have rolled out our cMaintenance app for a leading pharmaceutical company in India. The company has multiple locations in over 23 countries globally. We have successfully rolled out the app for 3 of their locations in India. They are leveraging cMaintenance for their calibration & facility maintenance work.

Shrikant Nistane presented with SAP at the Zebra App forum in Vegas - This year Shrikant Nistane, CEO Crave InfoTech & David Sacks, Sr. Director Platform Partner Ecosystem SAP, presented the SAP Product Development Partnership program at Zebra's annual conference at Planet Hollywood in Las Vegas.

Webinar for Healthcare companies in South Africa – Pharmaceutical companies are looking for proven IT solutions to overcome their day to day challenges around production process, equipment maintenance, delivery and distribution as part of SCM. After having studied these challenges, we have developed SAP mobility solutions for automating many of such processes to help achieve operational efficiency. In the webinar, we talked about those challenges and how our clients have benefited with our industry tailored solutions.
