

Dynamic Modelling – Build apps quickly with zero coding

Situation

Implementation for new apps and add-ons is so lengthy that it is not worth the trouble. Valuable improvements are passed over because the business cannot afford to be in limbo.

Challenges

- Lengthy design and development phases for even the most basic of apps.
- Time required to deploy and test the app can be months.
- Unnecessarily complex, non user friendly UI is the norm.
- Opportunity cost associated with the time your company spends not performing at peak efficiency.
- Apps are normally only available while online.

Solution Innovation

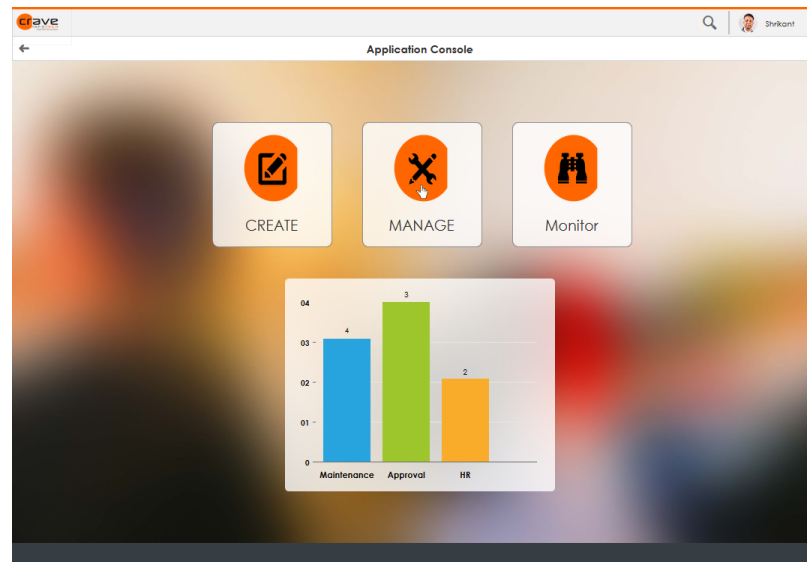

- Quickly design and configure simple, Cloud Compatible apps with zero coding.
- Transition into user friendly UI and overall user experience.
- Implementation is 99% faster than competition, taking a few hours instead of months.
- Contains fully functional offline mode unlike most apps on the market.
- Apps have same user experience whether on IOS , Android , tablet or Desktop.
- Fully incorporates novel mobile features like signature capture, QR codes scanning & document attachments.

Users

- CXO Level Executives
- VP's Directors
- Managers

Value Drivers

- A disruptive app, pre-packaged to expedite the implementation time, ROI realization, and reduction in TCO up to 80%.
- Completely scalable technology that grows with the business
- Create an app built with your business's specific needs and goals in mind.
- Customizable for any industry specific workflow
- Fully configurable UI from the back-end

Industry/LoB

- All industries.
