

Digitize the Medical Records using cEMR

Situation

- Medical Practitioners are looking for a simplified, user-friendly, and intuitive mobile application to record patient details, medical history, diagnostics, vitals, medications prescribed, referrals etc.

Challenges

- Doctor doesn't have immediate access to patient data and history when he needs to make decisions.
- Doctor takes input data back to the computer instead of instantly entering it, resulting in lost patient information.
- Searching for EMR on desktop interrupts doctor's time during appointments, bedside visits, and on-the-go.
- Compliance to Healthcare regulations is getting more costly and difficult day-by-day.
- Handwritten prescription processing is unnecessarily time consuming.

Solution Innovation

- Fully integrated with SAP Cloud Platform, EHS, PACS, Claim Management, Inventory, and financial system.
- Machine Learning capabilities.
- Novel application for the doctor to view the necessary patient demographics, clinical history, lab history, imaging history, and prescription history for current and previous visits.
- Allows doctor to record clinical orders, tasks, write prescription, referrals, discharge, and make a suggested course of action.
- One UI for doctor on mobile, desktop, and tablet to make real-time medical decisions.
- Instantly update patient history with data input at the source.

Users

- Medical Practitioners (Doctors, Nurses etc)
- Hospital Administrator

Value Drivers

- Increases patient turnover by 30%.
- Access EMRs on-the-go, increasing quality of care.
- A disruptive app, pre-packaged to expedite the implementation time, ROI realization, and reduction in TCO up to 80%.
- Completely scalable technology that grows with the business.
- No additional efforts or time for medical record management.
- Real time reporting.
- In app signature capture
- Fully configurable UI from the back-end
- Multi-lingual capabilities
- Fully responsive with iOS, Android, Tablet, etc. out of the box
